

Methods: Egg Pumping

- Substrate matters
- Okay for presence (depending on intake design)

Methods: Egg Pumping

- Substrate matters
- Okay for presence (depending on intake design)

Study Sites

Thunder Bay, ON

Low currents, silty
Mostly mud, some rock

2 mi

Grand Traverse Bay, MI

Strong currents, clean
Cobble reefs, hard sand

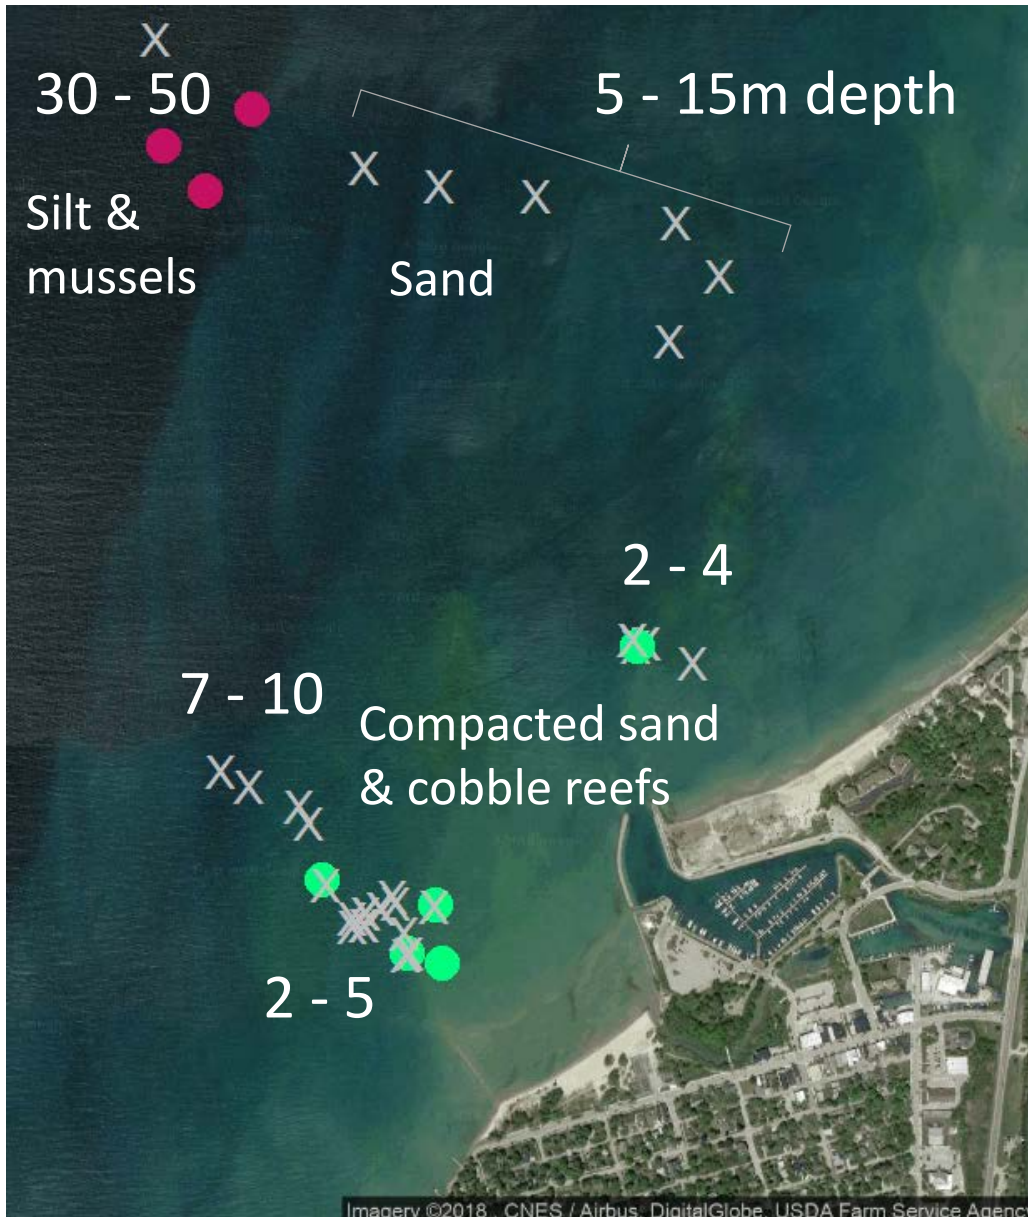

Chaumont Bay, NY

Bedrock shoals,
Sand/silt flats

Grand Traverse Bay, Lake Michigan

Unknown ID:

- Smaller eggs
- None eyed (late April)
- Possible observations of spawning cisco

Lake whitefish:

- shallow (< 5m)
- around cobble reefs

Grand Traverse Bay, Lake Michigan

Silt & mussels

Compacted sand & rock

Sand flats

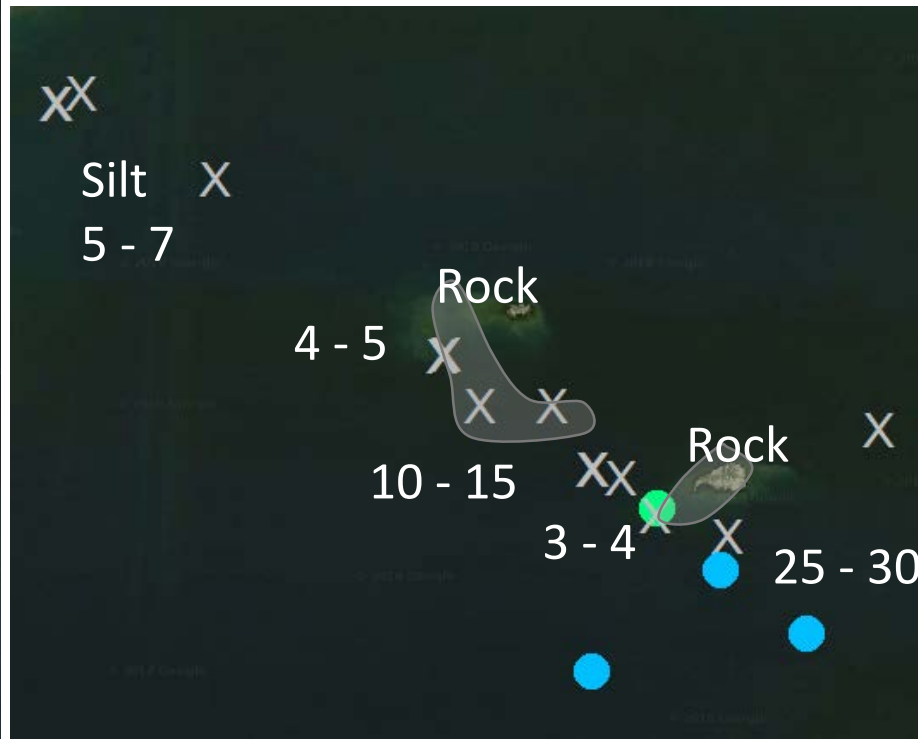

Cobble reef

Thunder Bay, Lake Superior

Lake whitefish "Cisco"

Thunder Bay, Lake Superior

Lake whitefish

- Shallow (< 5m)
- Rock
- “Cisco”
- Deep (most > 20m)
- Mud/silt

Thunder Bay, Lake Superior

Shallow, rocky

Island perimeter

Deep, silt

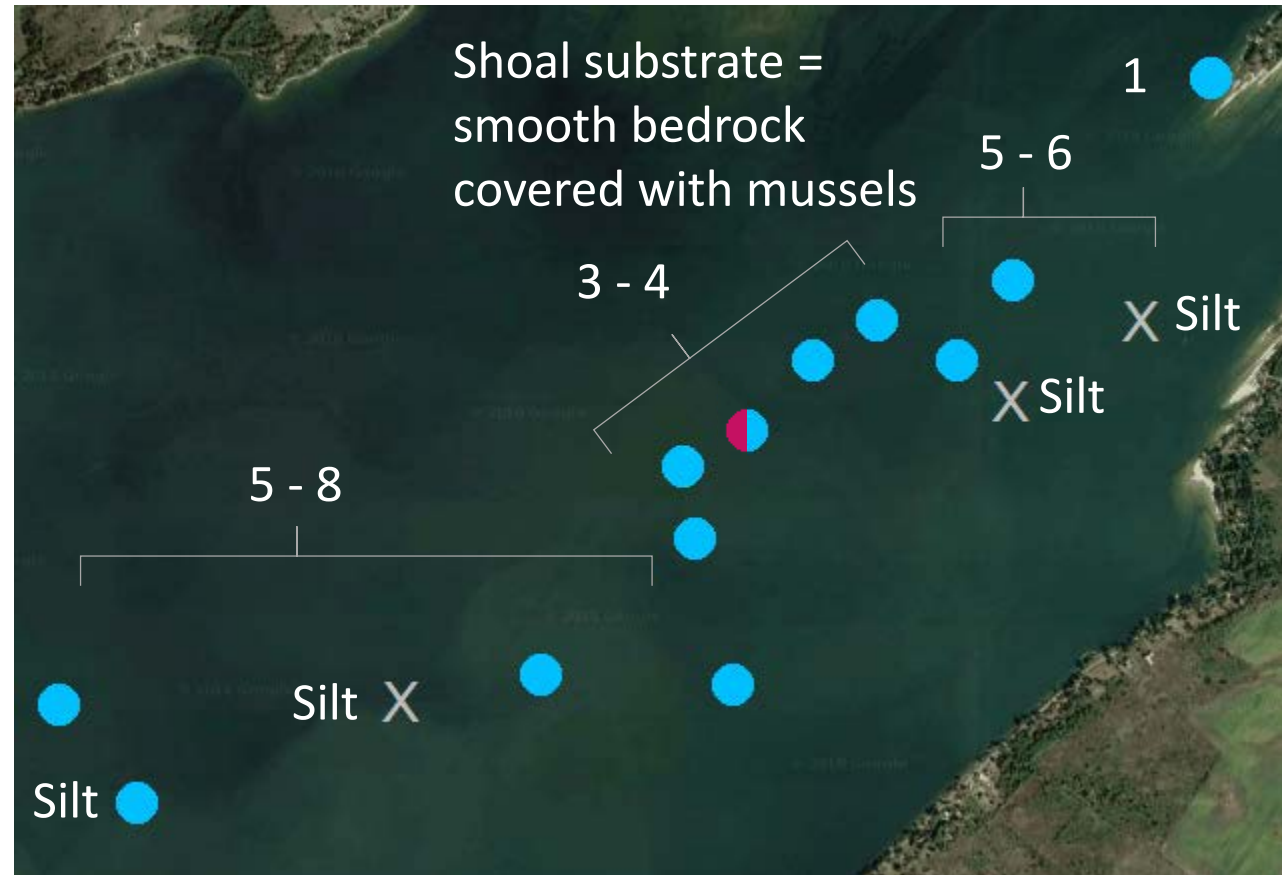

Chaumont Bay, Lake Ontario

Unknown ID:

- Only one egg

“Cisco”:

- Agrees with egg deposition

Chaumont Bay, Lake Ontario

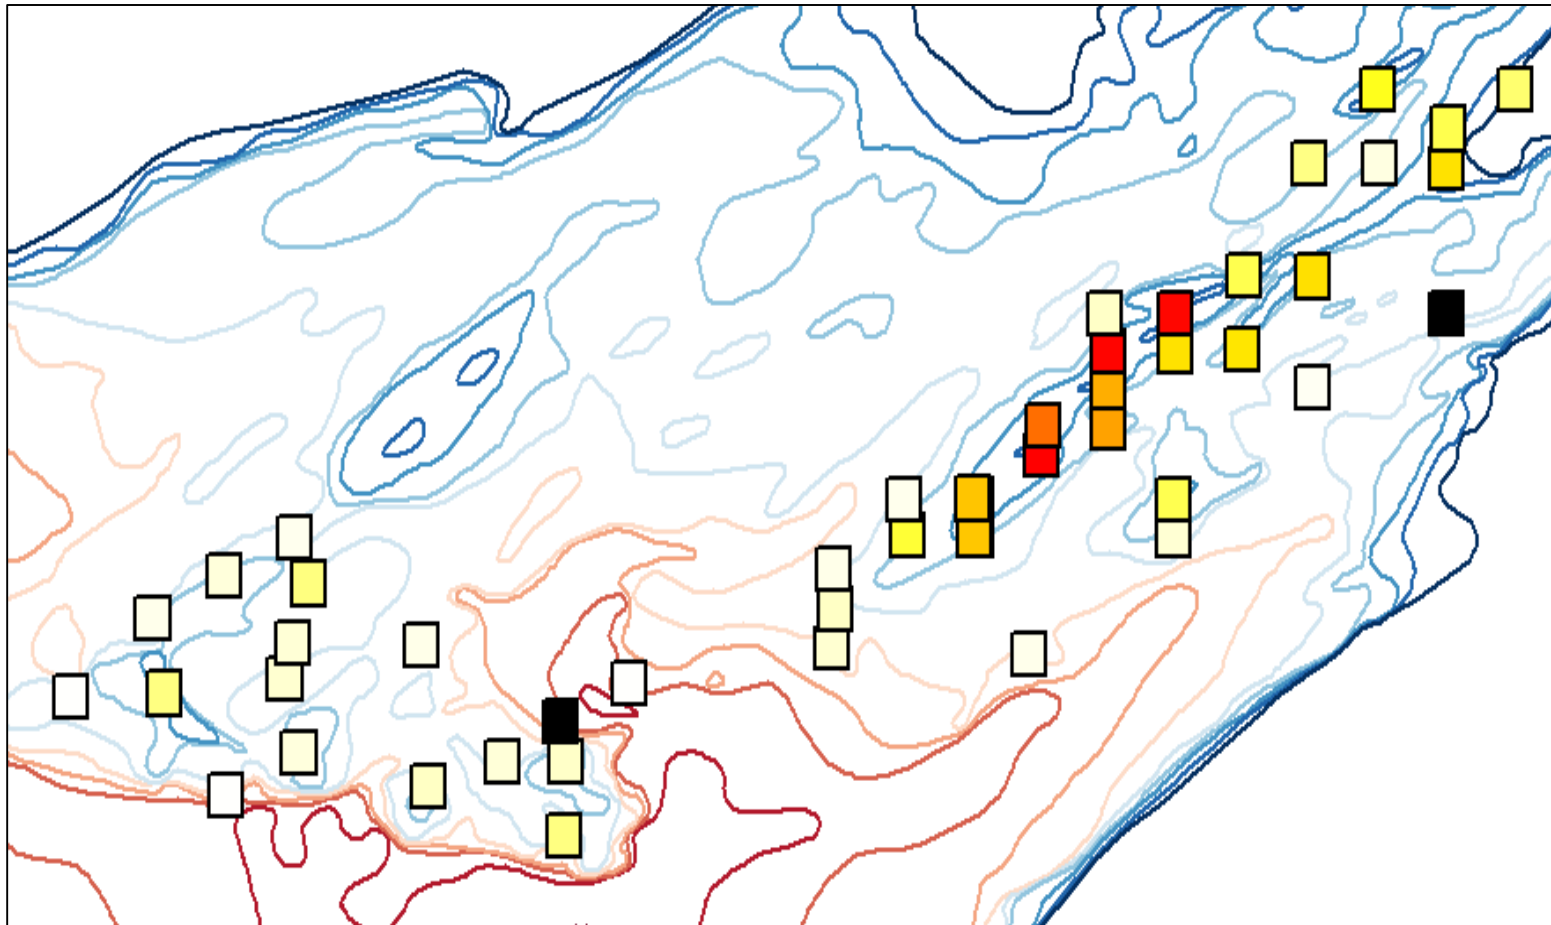

Depth (m)

Eggs/day

Highest spawning intensity
(egg deposition rate) on shallow shoals

Chaumont Bay, Lake Ontario

Chaumont Bay, Lake Ontario

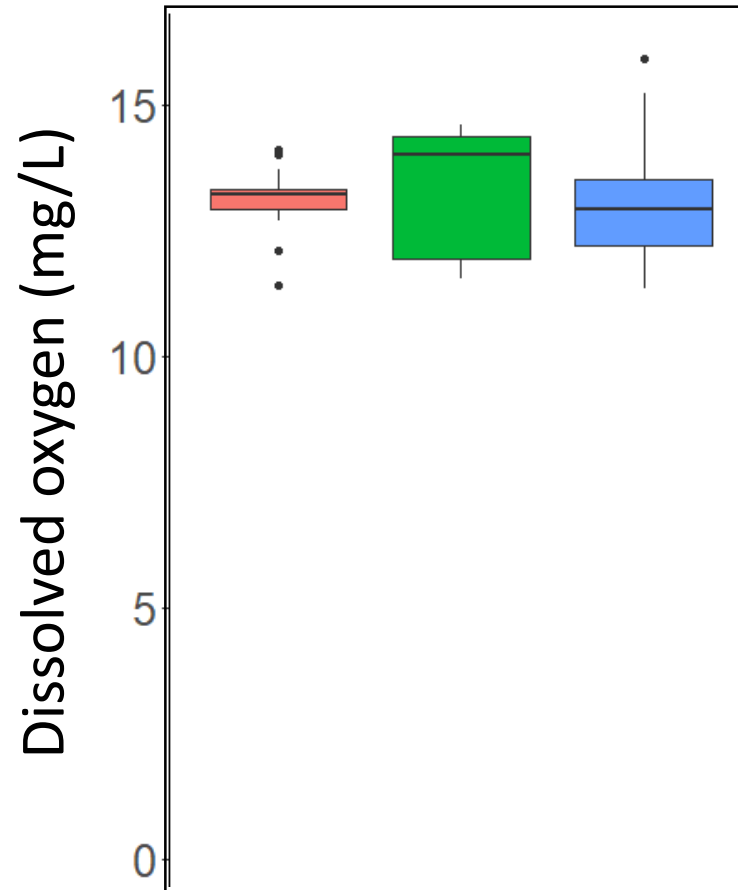

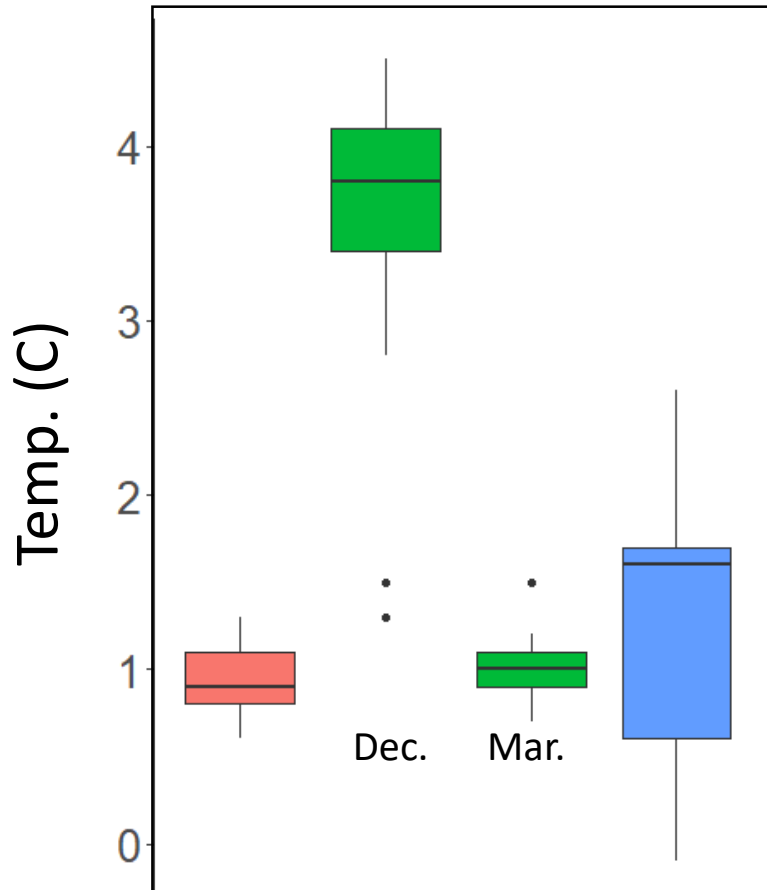

Bedrock shoals & mussels

Sand/silt

Benthic Conditions

Summary

- Different populations = different spawning strategies
- Cisco historically abundant, spawned everywhere, did many smaller populations specialize in different habitats?
- Why aren't cisco spawning in historical spawning bays in Lake Ontario?
